

## Unfolding and Panel Layout Instructions

50' x 100' Example (50' = To be unfolded; 100' = To be rolled out)

Note: Please verify the white side of the cover will face upward when unfolding to avoid rolling out backwards and having to reposition an open cover. This is a typical cover size being unfolded and does not represent all FeedPro-G<sup>™</sup> cover variations.

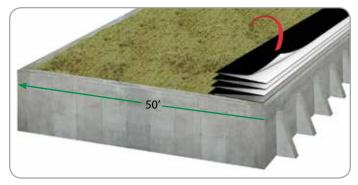

Unroll entirely across the **Length** of the pile.

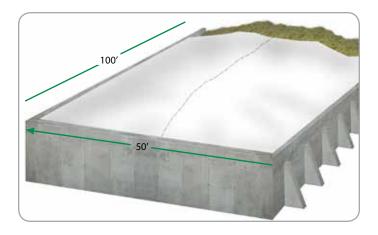

Unfold accordian-pleats along the **Width** of the pile.

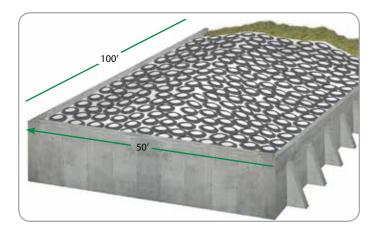

## **Final Layout**

## **Raven Industries Silage Covering Recommendations**

Covering is extremely important to keep air and moisture from penetrating into the silage mass. Plastic should be weighted down with some form of dunnage to keep the plastic tightly secured and in direct contact with the silage mass.
